ORWAK LAUNCHES ORWAK CONNECT – A NEW COMMUNICATION SERVICE

Today, at the World's Leading Waste Trade Show, IFAT in Munich, we are happy to present Orwak Connect, a new smart option, for our innovative and dynamic POWER baler range.

Connecting resources – always one step ahead

Orwak Connect is a modem-based communication service enabling the baler to send a message for full bale or if the machine requires maintenance. Furthermore, the service offers great supervising opportunities! In the Orwak Connect web portal it is easy for the customer to monitor the fleet of balers and to gather bale statistics for a specific period of time. A premium option that will be released later this year is a built-in scale for collecting and viewing bale weight data in the portal.

Benefit more from the baler with Orwak Connect

The new service provides numerous advantages for WMCs, recyclers, retail chains, logistic centers and customers in many more market segments:

- **To stay in control** when monitoring the exact bale production from the fleet of balers
- **Optimal logistics** when planning the bale collection routes efficiently
- **Uninterrupted use** as the caretaker gets notified immediately when a machine needs attention
- **Productive use of time** as there is no need to check on balers spread out in a large area on routine, only when notified

M2M communication is undeniably playing an increasingly important role in society and Orwak Connect contributes to connecting resources for the future!
