

## **NEW COMPACT BALER WITH EXTRA WIDE LOADING GATE**

Orwak launches a new baler in the COMPACT family. The new addition, model 3120, offers strong compaction on the spot: compact machine design, yet impressive volume reduction and a bale weight of up to 100 kg. The loading gate is extra wide, 1000 mm, and for rich placement opportunities, the 3120 is a single phase unit.

### **SMART DESIGN FOR EFFECTIVE COMPACTION ON THE SPOT**

The new baler has a modern, smart and compact design for convenient transportation and installation. It is ideal for compaction of both cardboard and plastic and a material selector makes the switch between the materials easy.

The 3120 is equipped with auto start as a standard feature and comes with a user-friendly panel with bale, temperature and service indicators as well as a bale size selector.

### **EXTRA GENEROUS LOADING GATE**

For fast and convenient infeed of cardboard boxes and voluminous plastic foil, the 3120 comes with an extra generous 1000 mm wide loading gate.

### **AUTOMATED BALE EJECTION**

The bales weigh up to 100 kg and are easily removed thanks to a semi-automated bale ejection function. The strap rolls are mounted on top of the unit and the strapping is three-fold for an extra tight grip of the bale.

### **BALER WITH BRAINS AND SAFETY AT HEART**

An Orwak is always easy to maneuver, safe and silent. This is what we call "Advanced Simplicity". The 3120 complies with the EN 16500:2014 safety requirement standard for vertical balers and is prepared for Orwak's communication service Connect.
